present a seminar on

Information Design in Strategic Experimentation Environments

by

Carlo A. Cabrera

PhD Candidate, LSE

26 August, Friday

4:00-5:00 p.m. – Room 303

Abstract:

We characterise the optimal policy of an information designer who can disclose information about the actions of payoffs of agents who face identical two-armed bandits. The optimal symmetric policy is a cut-off in the designer's beliefs. We characterise sufficient conditions for this cutoff to be implementable.

About the speaker:

Carlo is pursuing his PhD at the London School of Economics and Political Science. His interests are in microeconomic theory and political economy. He completed his BSc in Economics and Quantitative Finance at the Singapore Management University.

Free and open to the public
